

#10 Days of Code

Day 2:

Objective:

An array is a type of data structure that stores elements of the same type in a contiguous block of memory. In an array, **A**, of size **N**, , each memory location has some unique index, **I** (Where **0** <= **I** < **N**).

Task:

Reverse an array of integers

Sample:

Input:

Enter the Array Size : 4

Enter the Array: 1 4 3 2

Output:

Reverse Array: 2 3 4 1
