# #10 Days of Code

## Day 6:

### Objective:

To calculate word score of the string. Value of N (1-20) and string in lowercase.

### Task:

There are 5 vowels in English. [A, E, I, O, U]. Given a string, compute the word score for the string. If the word of the string has even vowels then score of the word is 2 else 1. Likewise compute the score for entire string.

### Sample:

### Input:

3

python is good

### Output:

4
